EDUCATION

Thadomal Shahani Engineering College

Bachelor of Engineering in Computer Engineering (CGPA: 8.61)

Mumbai, MH

2023 – 2027

TECHNICAL SKILLS

Frontend: ReactJS, Tailwind CSS, SASS, HTML, CSS

Backend: Node.js, Express.js, FastAPI, REST APIs

AI/ML: PyTorch, Graph Neural Networks (GNNs), Generative AI, LLM Applications

Databases: MongoDB, PostgreSQL, SQL, NoSQL

Programming: Java, JavaScript, Python

Tools & Technologies: Git, GitHub, VS Code, n8n

EXPERIENCE

Summer Intern

Deloitte India

Jun 2026 – Aug 2026

Mumbai, India

- Contributed to the Technology & Transformation department by developing an in-house **Small Language Model (SLM)** for automated Python code review.
- Built data preparation pipelines to ingest source files and transform them into structured datasets for fine-tuning, including **LLM-based synthetic data generation**.
- Explored **base SLM, Retrieval-Augmented Generation (RAG), and fine-tuning** approaches to determine the optimal solution for the code review task.
- Applied **QLoRA fine-tuning** and evaluated the model using synthetically generated test cases to assess code review performance and defect detection.

Full Stack Developer Intern

Choice TechLabs

Dec 2025 – Feb 2026

Mumbai, India

- Developed Python-based data scraping and rating computation pipelines for a mutual fund rating system based on Morningstar and Value Research methodologies.
- Designed **n8n** automation workflows integrating spreadsheets and internal tools to streamline operational processes and reduce manual effort.

PROJECTS

Trip Genie | Python, Vanilla JS, ReportLab, SERP API, Gemini API

GitHub

- Developed a personalized trip planner generating day-wise itineraries using SERP API and Gemini API.
- Integrated destination insights, weather data, and travel recommendations for dynamic planning.
- Built backend logic in Python and interactive UI using Vanilla JavaScript.
- Implemented offline-ready PDF itinerary generation using ReportLab.
- Added interactive customization features for improved user experience.

Swepr - Smart CLI Cleanup Tool | Node.js, Commander.js, Inquirer.js, Ora

GitHub

- Built a cross-platform CLI tool to reclaim disk space by detecting and removing inactive development environments (**node_modules**, **venv**) using smart inactivity analysis.
- Implemented timestamp-based activity detection, parallel scanning, and interactive configuration workflows for efficient project cleanup.
- Added recovery-focused safeguards including soft-delete via system trash, automatic **requirements.txt** generation, and lifetime storage tracking.

ACHIEVEMENTS

- 2nd Runner Up at **TSEC Hacks 2026**, competing among multiple college's teams and building a functional prototype within 24 hours.
- Ranked among the **Top 28 teams** nationwide in **Deloitte Hacksplosion 2026** out of 21,000+ registrations, securing a Summer Internship opportunity at Deloitte.
