Siddhesh Todi

Full Stack Developer | AI and Automation | ReactJS | Node.js | Java
+91 8879985555 | siddheshtodi@gmail.com | Personal Website | LinkedIn | GitHub

Education

Thadomal Shahani Engineering College Mumbai, MH
Bachelor of Engineering in Computer Engineering (CGPA: 8.61) *2023 – 2027*

Technical Skills

Frontend: ReactJS, Tailwind CSS, SASS, HTML, CSS
Backend: Node.js, Express.js, FastAPI, REST APIs
AI/ML: PyTorch, Graph Neural Networks (GNNs), Generative AI, LLM Applications
Databases: MongoDB, PostgreSQL, SQL, NoSQL
Programming: Java, JavaScript, Python
Tools & Technologies: Git, GitHub, VS Code, n8n

Experience

Summer Intern Jun 2026 – Aug 2026
Deloitte India *Mumbai, India*
- Contributed to the Technology & Transformation department by developing an in-house **Small Language Model (SLM)** for automated Python code review.
- Built data preparation pipelines to ingest source files and transform them into structured datasets for fine-tuning, including **LLM-based synthetic data generation**.
- Explored **base SLM, Retrieval-Augmented Generation (RAG), and fine-tuning** approaches to determine the optimal solution for the code review task.
- Applied **QLoRA fine-tuning** and evaluated the model using synthetically generated test cases to assess code review performance and defect detection.

Full Stack Developer Intern Dec 2025 – Feb 2026
Choice TechLabs *Mumbai, India*
- Developed Python-based data scraping and rating computation pipelines for a mutual fund rating system based on Morningstar and Value Research methodologies.
- Designed **n8n** automation workflows integrating spreadsheets and internal tools to streamline operational processes and reduce manual effort.

Projects

WhatsApp Expense Tracker | *FastAPI, React, PostgreSQL, Docker* GitHub
- Built a WhatsApp expense tracker with a React dashboard for transaction corrections, category budgets, recurring payments, financial reports, and CSV imports and exports.
- Integrated **Jev intent classification** and local **GLiNER2 extraction** to convert natural-language messages into validated records, with WhatsApp-verified sessions and account-scoped APIs.
- Implemented **TanStack Query** caching and invalidation, duplicate webhook protection, and a **multi-stage Docker build** for the application.

Sweepr - Smart CLI Cleanup Tool | *Node.js, Commander.js, Inquirer.js, Vitest* GitHub
- Developed a Node.js CLI to identify inactive projects through source-file activity checks and selectively clean `node_modules` and Python virtual environments.
- Implemented recursive project discovery, configurable inactivity thresholds, dry-run previews, and interactive selection with bounded filesystem concurrency.
- Added system-trash cleanup, Python dependency exports, and persistent cleanup statistics, with automated tests for scanning, configuration, and cleanup safeguards.

Achievements

- 2nd Runner Up at **TSEC Hacks 2026**, competing among multiple college's teams and building a functional prototype within 24 hours.
- Ranked among the **Top 28 teams** nationwide in **Deloitte Hacksplosion 2026** out of 21,000+ registrations, securing a Summer Internship opportunity at Deloitte.
